Developing InTempo Applications

This instructor led hands-on course is designed for individuals involved in the design, development, testing and deploying of InTempo applications. Topics to be covered include:

- InTempo Software Architecture
- InTempo Application Development Cycle
- Planning InTempo Applications
- InTempo-Enabling Forms
- Working with Organizational Data
- Creating Role Sets
- Creating Process Maps
- Testing and Deploying InTempo Applications

As part of this course, individuals will build, test, and deploy a basic InTempo application.

Course Length:

Two days

Intended Audience:

- ❖ Individuals involved in the design, and development of InTempo applications

Prerequisites:

- ❖ Knowledge of scripting

Tools used in the class

- ❖ InTempo Process Designer

- ❖ InTempo Role Builder

What You Will Learn:

- ❖ After completing this course, which includes hands-on workshops, students can expect to have the ability to develop, test and deploy InTempo applications.

Course Outline:

1. InTempo Essentials

Describe InTempo architecture
Describe different individuals involved with InTempo deployment
Explain InTempo terminology
Outline the InTempo application development cycle

2. Planning for InTempo Applications

Analyze the business process to be automated
Plan the InTempo application

3. Developing the Forms

Describe the form development process for InTempo applications
Describe InTempo form types by environment
Describe the purpose of InTempo form fields
Outline the considerations for forms to be used with InTempo

4. Creating Role Sets

Explain the purpose of roles
Explain how the InTempo user directory and the organizational
data relate to roles
Describe InTempo extensions to BasicScript as they relate to roles
Create role definitions and role set functions

5. Creating Process Maps

Use InTempo Process Designer to create a process map
Create tasks and define task properties
Define actions and set their properties
Draw routes and set their properties
Describe task processing in InTempo

6. Testing and Deploying Applications

Test InTempo applications
Deploy InTempo applications into production
