Form Client

Web enable your internal business processes

If your organization is like most, you already have many internal business processes in place. But one of your biggest challenges is to efficiently and accurately capture the information that drives these processes.

Eliminate Cumbersome Paper-Based Processes

Adobe Form Client, formerly FormFlow®, is a feature-rich data capture solution that can help any organization become more efficient by using Web-enabled forms to share and route information. With Form Client, your organization can experience significant productivity gains by replacing paper backlogs with Web-enabled processes that integrate with existing systems and applications.

Capture Accurate Information Right from the Start

Form Client allows you to capture information from users with intelligent electronic forms and eliminate unnecessary rekeying, data-entry errors, and duplication of effort—enabling you to save time and money. Form Client also features flexible form deployment choices and routing options that enable easy file sharing and promote increased teamwork and efficiency among your employees.

Better Use of Your Business Information

Capturing information is one thing—using it to its full extent is another. Form Client includes a series of components that offer flexible data integration with your organization's existing applications. Form Client integrates with

Microsoft® Outlook® to route forms, includes digital signature functions, and is capable of integration with most databases. Form Client is also interoperable with Adobe Workflow Server technology to provide a structured, secure, and feature-rich business process automation solution.

Simple Desktop Deployment with Zero Administration

Form Client delivers instant, enterprise-wide form deployment without physically touching a single desktop computer. With Form Client, end-user components are automatically downloaded onto user desktops—with no work interruption. These components render forms in either the user's browser or the form filler application.

Accessibility

Verbal-eyes™ technology within the Form Client is a unique enabler that allows visually impaired individuals to complete forms from their desktop or online. If Verbal-eyes detects that a user is running a screen reader, it will dynamically determine what is required to activate its speech function and begin speaking to the user. If a screen reader is not in use, Verbal-eyes remains inactive. Form Client also works with speech-to-text technology, keyboard switches, and magnification programs to help organizations provide disabled users with better access to technology.

Adobe Network Publishing Solutions

Adobe Form Client is an integral component of Adobe Network Publishing Solutions, helping businesses and people work together more productively and effectively.

Key Features

- Certified to work with the following digital signature providers: Entrust®, VeriSign®, Silanis®, RSA Security®, and SmartTrust
- OLE, COM/DCOM architecture for application and database integration
- Table Control Object feature to quickly lay out a table with rich functionality for each and every cell
- XML-based architecture ensures successful integration
- Integrates with Microsoft Outlook, Microsoft Windows®, Novell® GroupWise, ERP, and CRM systems
- Choice of preferred mail client: MAPI, VIM, SMTP/POP3
- Integrates with Adobe Form Server and Output Server products
