

# JetForm Output Pak™ for Oracle® E-Business Suite

## Take Control of Your Oracle E-Business Suite

Companies implementing Oracle E-Business Suite realize the benefits of integrating their data with their business processes. However, what customers see is not the integrated data management, but the document output produced as a result of these business processes—the order confirmation, the check, the shipping documents or the invoice. A document provides the human interface to data and is a company's key touchpoint with customers.

JetForm's Output Pak for Oracle E-Business Suite greatly enhances the appearance and effectiveness of customer touchpoint documents, enabling you to improve communication with your customers, while simultaneously reducing costs and improving corporate image. Our XML-based solution allows you to produce personalized, customizable documents quickly and easily from Oracle E-Business Suite without draining your organization's resources.

## Flexible Output in Multiple Formats

The Output Pak for Oracle E-Business Suite provides the power and flexibility your business needs in a document output solution. With the Output Pak, you can present customers and business partners with documents such as invoices, packing slips and checks in a variety of formats for delivery via the Web, e-mail, fax or print.

The JetForm solution integrates easily with Oracle E-Business Suite, making it transparent to the end user. It works in conjunction with Oracle Reports to extract XML data from your Oracle E-Business Suite. The data is then merged with a document template you create using JetForm's easy-to-use document template designer. The result is an extremely flexible and cost-effective way to create and maintain customer-facing documents in numerous output formats.

## Dynamic Documents

The JetForm Output Pak's dynamic document capabilities make it easy for you to tailor any touchpoint document for a specific audience or customer. For instance, the same document template is used to generate an invoice with three or 150 detail lines—the data itself controls the appearance of the final document. This means the JetForm solution also enables you to include personalized messages in your documents, leading to increased upsell opportunities and stronger brand awareness.

## A Global Solution

In a global, competitive business environment, documents must be created and delivered worldwide. To support your businesses operating in multiple countries, JetForm Output Pak for Oracle E-Business Suite can generate documents in a variety of languages including English, French, German, Swedish, Spanish, Italian, Finnish, Norwegian, Danish, Brazilian Portuguese, Czech, Polish, Hungarian, Russian, simplified Chinese, traditional Chinese, Korean and Japanese.

### Before

### After

## Easy Document Design

The JetForm Output Pak for Oracle E-Business Suite enables you to customize your documents with company logos, graphics and bar codes and create multi-page or multi-part documents. Produce documents quickly and easily using JetForm's comprehensive WYSIWYG graphical design and development tool. Just point and click to create exact electronic replicas of existing paper documents or design even the most complex new documents. No more waiting for an Oracle Reports programmer to modify reports to make even minor changes to your document. You decide where fields, logos, signatures and bar codes print — making changes in minutes, not hours or days.

## Out-of-the-box Document Templates

The Output Pak for Oracle E-Business Suite includes a comprehensive set of pre-built document templates that work out-of-the-box. These templates include the most commonly required documents, many in both landscape and portrait page orientation. And it's easy to customize these out-of-the-box templates with your company information, getting you up and running quickly, with very little effort.

### Document Templates Included:

- Invoice
- Invoice — Credit Memo
- Invoice — Debit Memo
- Purchase Order (PO)
- Request for Quotation (RFQ)
- Commercial Invoice
- Sales Order Acknowledgment
- Bill of Lading
- Check

JetForm also provides the tools to easily create documents from any Oracle Report, enabling fast integration of new forms beyond those included with the Output Pak.
